

## Current Data and Indicators

# Regional Forecasts of Unemployment and Employment in the German Federal States and Labour Market Districts

Issue  
1/2013

The following pages present forecasts of the Institute for Employment Research, Germany (IAB) of the number of unemployed as well as the number of people in employment subject to social security contributions in the western and eastern parts of Germany, the German Federal States and the labour market districts of the German Federal Employment Agency (Bundesagentur für Arbeit). At the IAB, the calculations are carried out in the Regional Research Network.

Date:  
26th March, 2013

<b>3. Employment in the Labour Market Districts</b>	<b>4</b>
<b>4. Unemployment in the Federal States</b>	<b>9</b>
<b>5. Unemployment in the Labour Market Districts</b>	<b>10</b>

## 1. Methodology

The forecasts for the number of unemployed and those in employment subject to social security contributions are carried out in a three-step process:

1. First, eight different time-series models are estimated. In two of these models, only former values of the dependent variable are included. These models adapt best to the short-term development in a region if there are large fluctuations in the region or there is no clear pattern in the recent past. Two further models decompose the time series into different components such as the level, trend, seasonal and business-cycle influences. The advantage of these two models is that they have a high and robust forecast quality if the time series has a regular and clearly identifiable long-term pattern. In order to profit from the advantages of both types of models, further models were constructed which use a combination of these two approaches. Especially in the case of relatively small regional units, as is the case with the labour market districts, it needs to be assumed that regional interdependences play an important role. Such spatial interdependencies are accounted for in three further models. Two of these treat unemployment and employment as separate variables whereas the third model (first used in March 2011) also accounts for the dependencies between the unemployed (at their place of residence) and the employed (at their place of work). The models with spatial autocorrelation were developed at the IAB in order to improve the forecast accuracy.
2. In order to take the pros and cons of the different models used in the first step into account, an average of the models is calculated in a second step. However, in this so-called pooling, in each region only those models are included whose forecasts have the smallest deviation from the forecast for Germany. At the same time, in order to control for

international and national influences, we adjust the regional forecasts to fit the values for the national forecast which take these (inter)national dependencies into account. Hence, the national forecast is a further explanatory variable in our pooled model for every region. The current forecast is based on those in the IAB-Kurzbericht 6/2013 (in German only).

3. In order to verify the validity of the forecasts, the staff at the ten Regional Offices of the IAB check the plausibility of the results. In this step it is possible to take important unique events in a region into account. Thus, regional expertise is contained in the forecasts.

By definition, forecasts are uncertain. For this reason, lower and upper bounds are calculated so that the future true value lies within this interval with a probability of roughly 66%. Because the underlying regional forecast model differs from the one used for the national forecasts, the statistical uncertainty and hence the lower and upper bounds differ between the two.

A more complete explanation (in German only) of the methodology used can be found in:

Bach et al. (2009): Der deutsche Arbeitsmarkt – Entwicklungen und Perspektiven. In: Institut für Arbeitsmarkt- und Berufsforschung, Nürnberg (Ed.), Handbuch Arbeitsmarkt 2009, (IAB-Bibliothek, 314), Bielefeld: Bertelsmann, p. 64–78.

## 2. Employment in the Federal States yearly average

	2012	2013 GDP: +1.3%			Growth rate 2012 to ... 2013 (in %)

<b>Germany (western/eastern/Total)*</b>									
Germany, western			23,531,000	23,824,000	23,729,000	23,918,000	1.2	0.8	1.6
Germany, eastern			5,456,000	5,481,000	5,448,000	5,515,000	0.5	-0.1	1.1
Germany (Total)			28,987,000	29,305,000	29,177,000	29,433,000	1.1	0.7	1.5

\* Due to rounding off, differences between the sum of the labour market districts and Germany can occur.

\*\* The statistical uncertainty which is represented in the lower and upper bounds is also affected by the size of a region. This means that the relative uncertainty of labour market districts is generally higher than for the Federal States. Therefore, the sums of the lower and upper bounds do not correspond to the values for the Federal States. The values for Germany (western/eastern/Total) shown here are those from the results of the sum of the Federal States.

Please quote as: Garloff, Alfred; Otto Anne; Schanne, Norbert; Wapler, Rüdiger; Weyh, Antje; Zillmann, Manja (2013): Regional Labour-Market Forecasts of Unemployment and Employment in Germany 2013. Date of the Forecasts: March 26th, 2013.

Total values correspond to those in the IAB-Kurzbericht 6/2013.

Source: Forecasts are based on data of the Federal Employment Agency. Time-span: January 1993 to December 2012.

\* Numbers for 2012 are real values and not forecasts.

\*\* Due to rounding off, differences between the sum of the labour market districts and Germany can occur.

\*\*\* The statistical uncertainty which is represented in the lower and upper bounds is also affected by the size of a region. This means that the relative uncertainty of labour market districts is generally higher than for the Federal States. Therefore, the sums of the lower and upper bounds do not correspond to the values for the Federal States. The values for Germany (western/eastern/Total) shown here are those from the results of the sum of the Federal States.

Please quote as: Garloff, Alfred; Otto Anne; Schanne, Norbert; Wapler, Rüdiger; Weyh, Antje; Zillmann, Manja (2013): Regional Labour-Market Forecasts of Unemployment and Employment in Germany 2013. Date of the Forecasts: March 26th, 2013.

Total values correspond to those in the IAB-Kurzbericht 6/2013.

Source: Forecasts are based on data of the Federal Employment Agency including the unemployed registered at local communities. Time-span: December 1997 to February 2013.

## Notes

Total values correspond to those in the IAB-Kurzbericht 6/2013.

Forecasts are based on statistical data of the Federal Employment Agency.

The time span for the employment data is January 1993 to December 2012. For unemployment, the data ranges from December 1997 to February 2013.

Please quote as: Garloff, Alfred; Otto Anne; Schanne, Norbert; Wapler, Rüdiger; Weyh, Antje; Zillmann, Manja (2013): Regional Labour-Market Forecasts of Unemployment and Employment in Germany 2013. Date of the Forecasts: March 26th, 2013.
