

Current Data and Indicators

# Regional Labour Market Forecasts

1/2018

The following pages present forecasts by the Institute for Employment Research, Germany (IAB) of the number of people in employment subject to social security contributions, the number of unemployed and the number of unemployed in the Social Code II and III systems as well as the number of people who are able to work and are eligible for benefits for various regions. Until the issue 1/2015, this forecast was published as "Regional Forecasts of Unemployment and Employment in the German Federal States and Labour Market Districts". At the IAB, the calculations are carried out in the Regional Research Network.

## Content

<b>Methodology .....</b>	<b>2</b>
<b>1. Employment in the Federal States .....</b>	<b>3</b>
<b>2. Employment in the Labour Market Districts .....</b>	<b>4</b>
<b>3. Unemployment in the Federal States .....</b>	<b>10</b>
<b>4. Number of Unemployed in the Social Code II System in the Federal States.....</b>	<b>11</b>
<b>5. Number of Unemployed in the Social Code III System in the Federal States .....</b>	<b>12</b>
<b>6. Unemployment in the Labour Market Districts .....</b>	<b>13</b>
<b>7. People Capable of Working and Eligible for Benefits in the Federal States.....</b>	<b>19</b>

## Methodology

The forecasts for the number of employed subject to social security contributions, the number of unemployed and those capable of working and eligible for benefits are carried out in a three-step process:

1. First, nine different time-series models are estimated. In two of these models, only former values of the dependent variable are included. These models adapt best to the short-term development in a region if there are large fluctuations in the region or there is no clear pattern in the recent past. Two further models decompose the time series into different components such as the level, trend, seasonal and business-cycle influences. The advantage of these two models is that they have a high and robust forecast quality if the time series has a regular and clearly identifiable long-term pattern. In order to profit from the advantages of both types of models, further models were constructed which use a combination of these two approaches. Especially in the case of relatively small regional units, as is the case with the labour market districts, it needs to be assumed that regional interdependencies play an important role. Such spatial interdependences are accounted for in three further models. Two of these treat employment, unemployment and the number capable of working and eligible for benefits as separate variables whereas the third model (first used in March 2011) also accounts for the dependencies between the unemployed (at their place of residence) and the employed (at their place of work). The models with spatial autocorrelation were developed at the IAB in order to improve the forecast accuracy. The last model, a stock-flow approach, uses the information that in- and outflow of workers provide about the future level of (un)employment. These models yield especially good forecasting results during turning points.

2. In order to take the pros and cons of the different models used in the first step into account, an average of the models is calculated in a second step. However, in this so-called pooling, in each region only those models are included whose forecasts have a relatively small deviation from the forecast for Germany. At the same time, in order to control for international and national influences, we adjust the regional forecasts to match the values for the national forecast which take these (inter)national dependencies into account. Hence, the national forecast is a further explanatory variable in our pooled model for every region. The current forecast is based on those in the IAB-Kurzbericht 7/2018 (in German only).
3. In order to verify the validity of the models, in a third step the results are compared with assessments at the ten Regional Offices of the IAB. In this step it is possible to take important unique events in a region into account. Thus, regional expertise is contained in the forecasts.

By definition, forecasts are uncertain. For this reason, lower and upper bounds are calculated so that the future true value lies within this interval with a probability of roughly 66%. Because the underlying regional forecast model differs from the one used for the national forecasts, the statistical uncertainty and hence the lower and upper bounds differ between the two. A more complete explanation (in German only) of the methodology used can be found in:

Bach et al. (2009): Der deutsche Arbeitsmarkt – Entwicklungen und Perspektiven. In: Institut für Arbeitsmarkt- und Berufsforschung, Nürnberg (Ed.), Handbuch Arbeitsmarkt 2009, (IAB-Bibliothek, 314), Bielefeld: Bertelsmann, p. 64–78.

## 1. Employment in the Federal States yearly average

Germany, eastern			6,002,000	6,135,000	6,070,000	6,201,000	2.2	1.1	3.3
Germany, (Total)			32,228,000	32,983,000	32,652,000	33,314,000	2.3	1.3	3.4

<sup>1)</sup> Values for September 2017 – December 2017 are estimates.<sup>2)</sup> Due to rounding off, differences between the sum of the labour market districts and Germany can occur.<sup>3)</sup> The statistical uncertainty which is represented in the lower and upper bounds is also affected by the size of a region. This means that the relative uncertainty of labour market districts is generally higher than for the Federal States. Therefore, the sums of the lower and upper bounds do not correspond to the values for the Federal States. The values for Germany (western/eastern/Total) shown here are those from the results of the sum of the Federal States.<sup>4)</sup> Values for Germany (western/eastern/Total) are rounded off to the nearest 1,000.

Total values correspond to those in the IAB-Kurzbericht 7/2018.

Source: Forecasts are based on data of the Federal Employment Agency. Time-span: January 1993 to December 2017.

Table „Unemployment in Labour Market Districts“ continued from previous page

LMD-No.	Labour Market District	Federal State	2017 <sup>1)</sup>	2018 GDP: +2,1%			Growth Rate 2017 to ... 2018 (in %)		
			Yearly average	Forecast <sup>2)</sup>	Lower Bound <sup>3)</sup>	Upper Bound <sup>3)</sup>	... Average ...	... Lower Bound ...	... Upper Bound ...
847	Passau	Bavaria	5,900	5,600	5,100	6,100	-5.1	-13.6	3.4
855	Rosenheim	Bavaria	8,000	7,300	6,900	7,800	-8.8	-13.8	-2.5
859	Traunstein	Bavaria	9,000	8,100	7,400	8,800	-10.0	-17.8	-2.2
863	Weilheim	Bavaria	9,900	9,100	8,600	9,700	-8.1	-13.1	-2.0
900	Berlin	Berlin	169,000	153,000	145,900	160,100	-9.5	-13.7	-5.3
Germany (western/eastern/Total) <sup>4)</sup>									
Germany, western			1,894,000	1,753,000	1,671,000	1,834,000	-7.4	-11.8	-3.2
Germany, eastern			639,000	580,000	546,000	615,000	-9.2	-14.6	-3.8
Germany, (Total)			2,533,000	2,333,000	2,218,000	2,449,000	-7.9	-12.4	-3.3

<sup>1)</sup> Numbers for 2017 are yearly averages and not forecasts.

<sup>2)</sup> Due to rounding off, differences between the sum of the labour market districts and Germany can occur.

<sup>3)</sup> The statistical uncertainty which is represented in the lower and upper bounds is also affected by the size of a region. This means that the relative uncertainty of labour market districts is generally higher than for the Federal States. Therefore, the sums of the lower and upper bounds do not correspond to the values for the Federal States. The values for Germany (western/eastern/Total) shown here are those from the results of the sum of the Federal States.

<sup>4)</sup> Values for Germany (western/eastern/Total) are rounded off to the nearest 1,000.

Total values correspond to those in the IAB-Kurzbericht 7/2018.

Source: Forecasts are based on data of the Federal Employment Agency. Time-span: December 1997 to February 2018.

## 7. People Capable of Working and Eligible for Benefits<sup>1)</sup> in the Federal States yearly average

	2017 <sup>2)</sup>	2018 GDP: +2,1%			Growth Rate 2017 to ... 2018 (in %)		
	Yearly average	Forecast	Lower Bound	Upper Bound	... Forecast ...	... Lower Bound ...	... Upper Bound ...

<sup>1)</sup> "erwerbsfähige Leistungsberechtigte".

<sup>2)</sup> Numbers for 2017 are yearly averages based on real values for January to November and an estimate for December and not forecasts.

<sup>3)</sup> Values for Germany (western/eastern/Total) are rounded off to the nearest 1,000. Due to rounding off, the sums for Germany (western/eastern/Total) may diverge slightly from official statistics.

Total values correspond to those in the IAB-Kurzbericht 7/2018.

Source: Forecasts are based on data of the Federal Employment Agency including the unemployed registered at local communities. Time-span: January 2005 to February 2018.
