Error Correction for ALWA SUF V3

Error Correction for the Variables 'etbs' and 'fpt'

'etbs'

The variable 'etbs' has not contained the Freelancer so far even though a value label 'Freelancer' exists for the value 9. You can generate the category 9 with following command:

Stata:

```
replace etbs = 9 if ettypa == 2
```

SPSS:

```
if (ettypa eq 2) etbs = 9.
```

'fpt'

The value labels for the variable 'fpt' have been wrong. You can fix the error with the following command.

Stata:

```
cap label drop fpt  
label define fpt -8 "Don't know" -7 "Refused" 1 "divorced/civil partnership  
annulled" 2 "separated" 3 "Partner died"  
label values fpt fpt
```

SPSS

```
value labels fpt  
-8 "Don't know"  
-7 "refused"  
1 "divorced/civil partnership annulled"  
2 "separated"  
3 "Partner died".
```
